First Post

Michael Kinyon • 28 Oct 2023

This is just a test post to keep my account from being deleted while I consider whether/how to use this.

In my first version I was confused because I didn't realize that LaTeX and Markdown were separate modes for editing.

Testing inline math: LaTeX's $x^2 + y^2 = z^2$ vs TeX's $x^2 + y^2 = z^2$.

Display:

$$\frac{d}{dx} \int_a^x f(t)dt = f(x)\,.$$
