

Schrödinger's cat

Hypersurreal • 4 Dec 2023

$$CAT \vee \neg CAT$$

We won't get into [the joy of cats](#) (full disclaimer: I haven't read it 😊), although there is indeed much joy in cats 😸

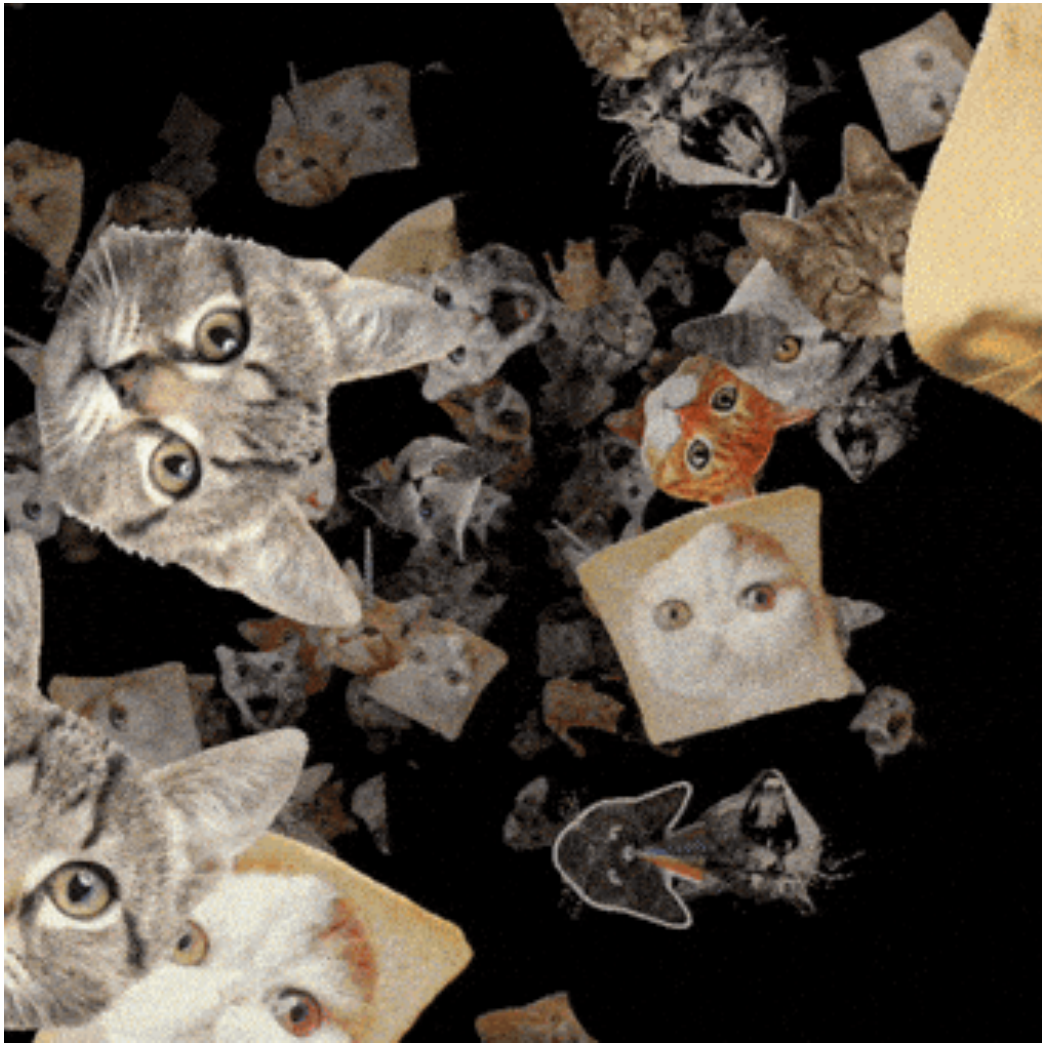

[Fuzzy cats](#) in particular.

Which just reminded me of something random I had been talking to MathGPT about 😸

It's fuzzy, it's quantum & it's surreal. Fuzzy. Quantum.. are u getting it? These are not 3 separate things. They are 1 & we are calling it ***hypersurreal***.

Anyways 😊.. back to what I was thinking about when I set out to write this post: the “cat of all cats” (which “isn't a cat”).

A [conglomerate](#) of cats.

Abstract nonsense indeed.
